

**9** WAY  
ADJUSTABLE

**CR** SERIES

*Thank you for purchasing Calvert Racing's CR Series line of adjustable rear shocks!*

## Adjusting your CR Series Shocks

### Understanding adjustments

1. Begin adjusting your shocks by turning the "adjustment dial" fully counter clockwise until they reach the 1/9 setting on the indicator. This is setting #1.
2. Turn the dial clockwise until you achieve designated adjustment.
3. The firmest setting is one revolution from softest setting.

## Fine tuning your CR Series Shocks

### Tips

Street Driving - Adjust your CR shocks to fit your preference, usually gives you best comfort between settings 2-5.

Foot Brake (RACE) - Firmer settings are typical, usually between 6-9.

Trans Brake (RACE) - Softer settings are typical, usually between 1-3

\* The provided tips are provided for a starting baseline, experimentation is always encouraged to get the most performance out of our shocks.
